

BUTTERFLY LIFE CYCLE

Egg

The butterfly lifecycle begins when a female, adult butterfly lays tiny eggs on a leaf. They are often attached to the leaf, and it's hard to notice them. Inside each egg, a baby butterfly is developing.

Caterpillar

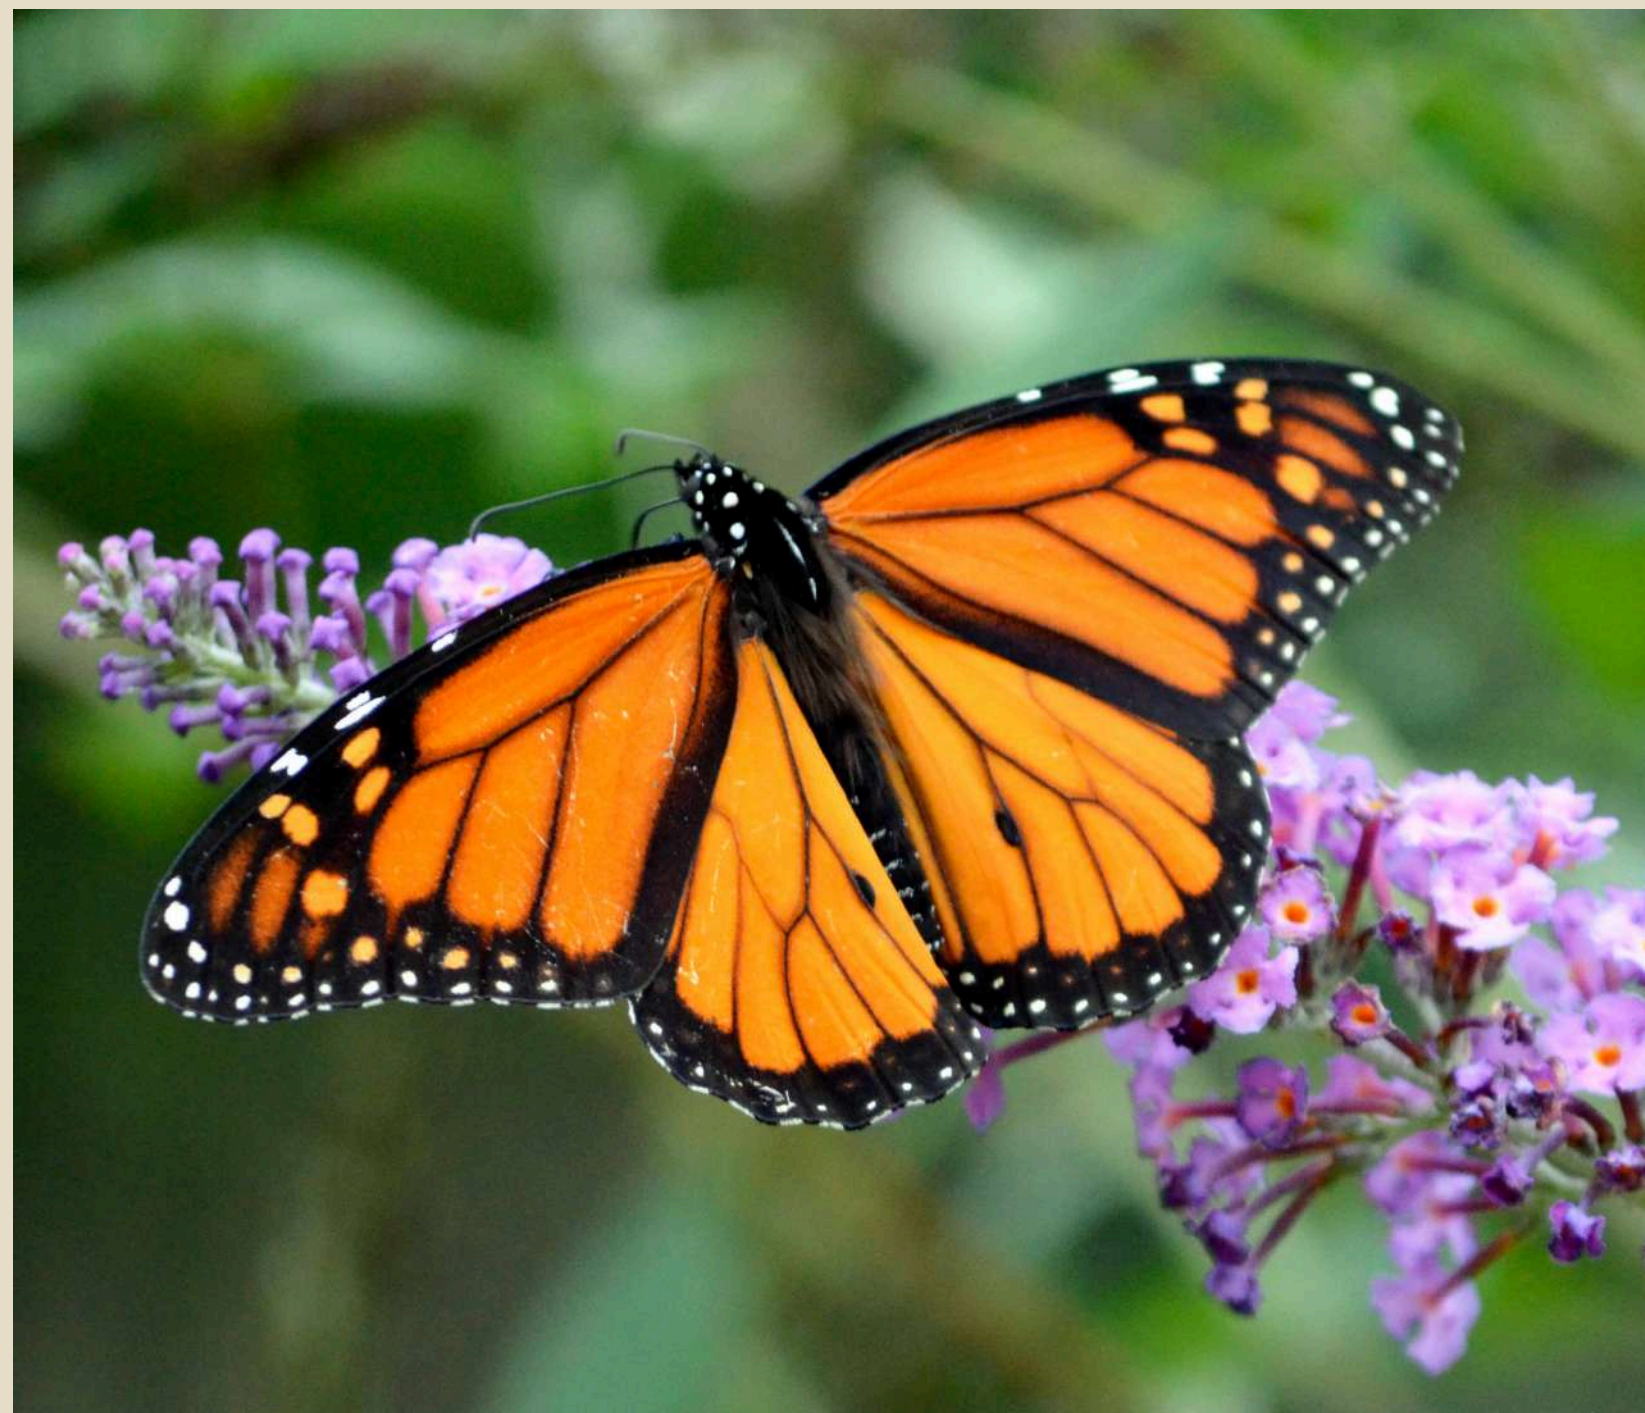

After a few days, the egg hatches, and a tiny caterpillar comes out. it is also sometimes referred to as a larva. It is very hungry and starts eating the leaves around it. Caterpillars have many legs and soft bodies. They keep growing by eating.

Pupa

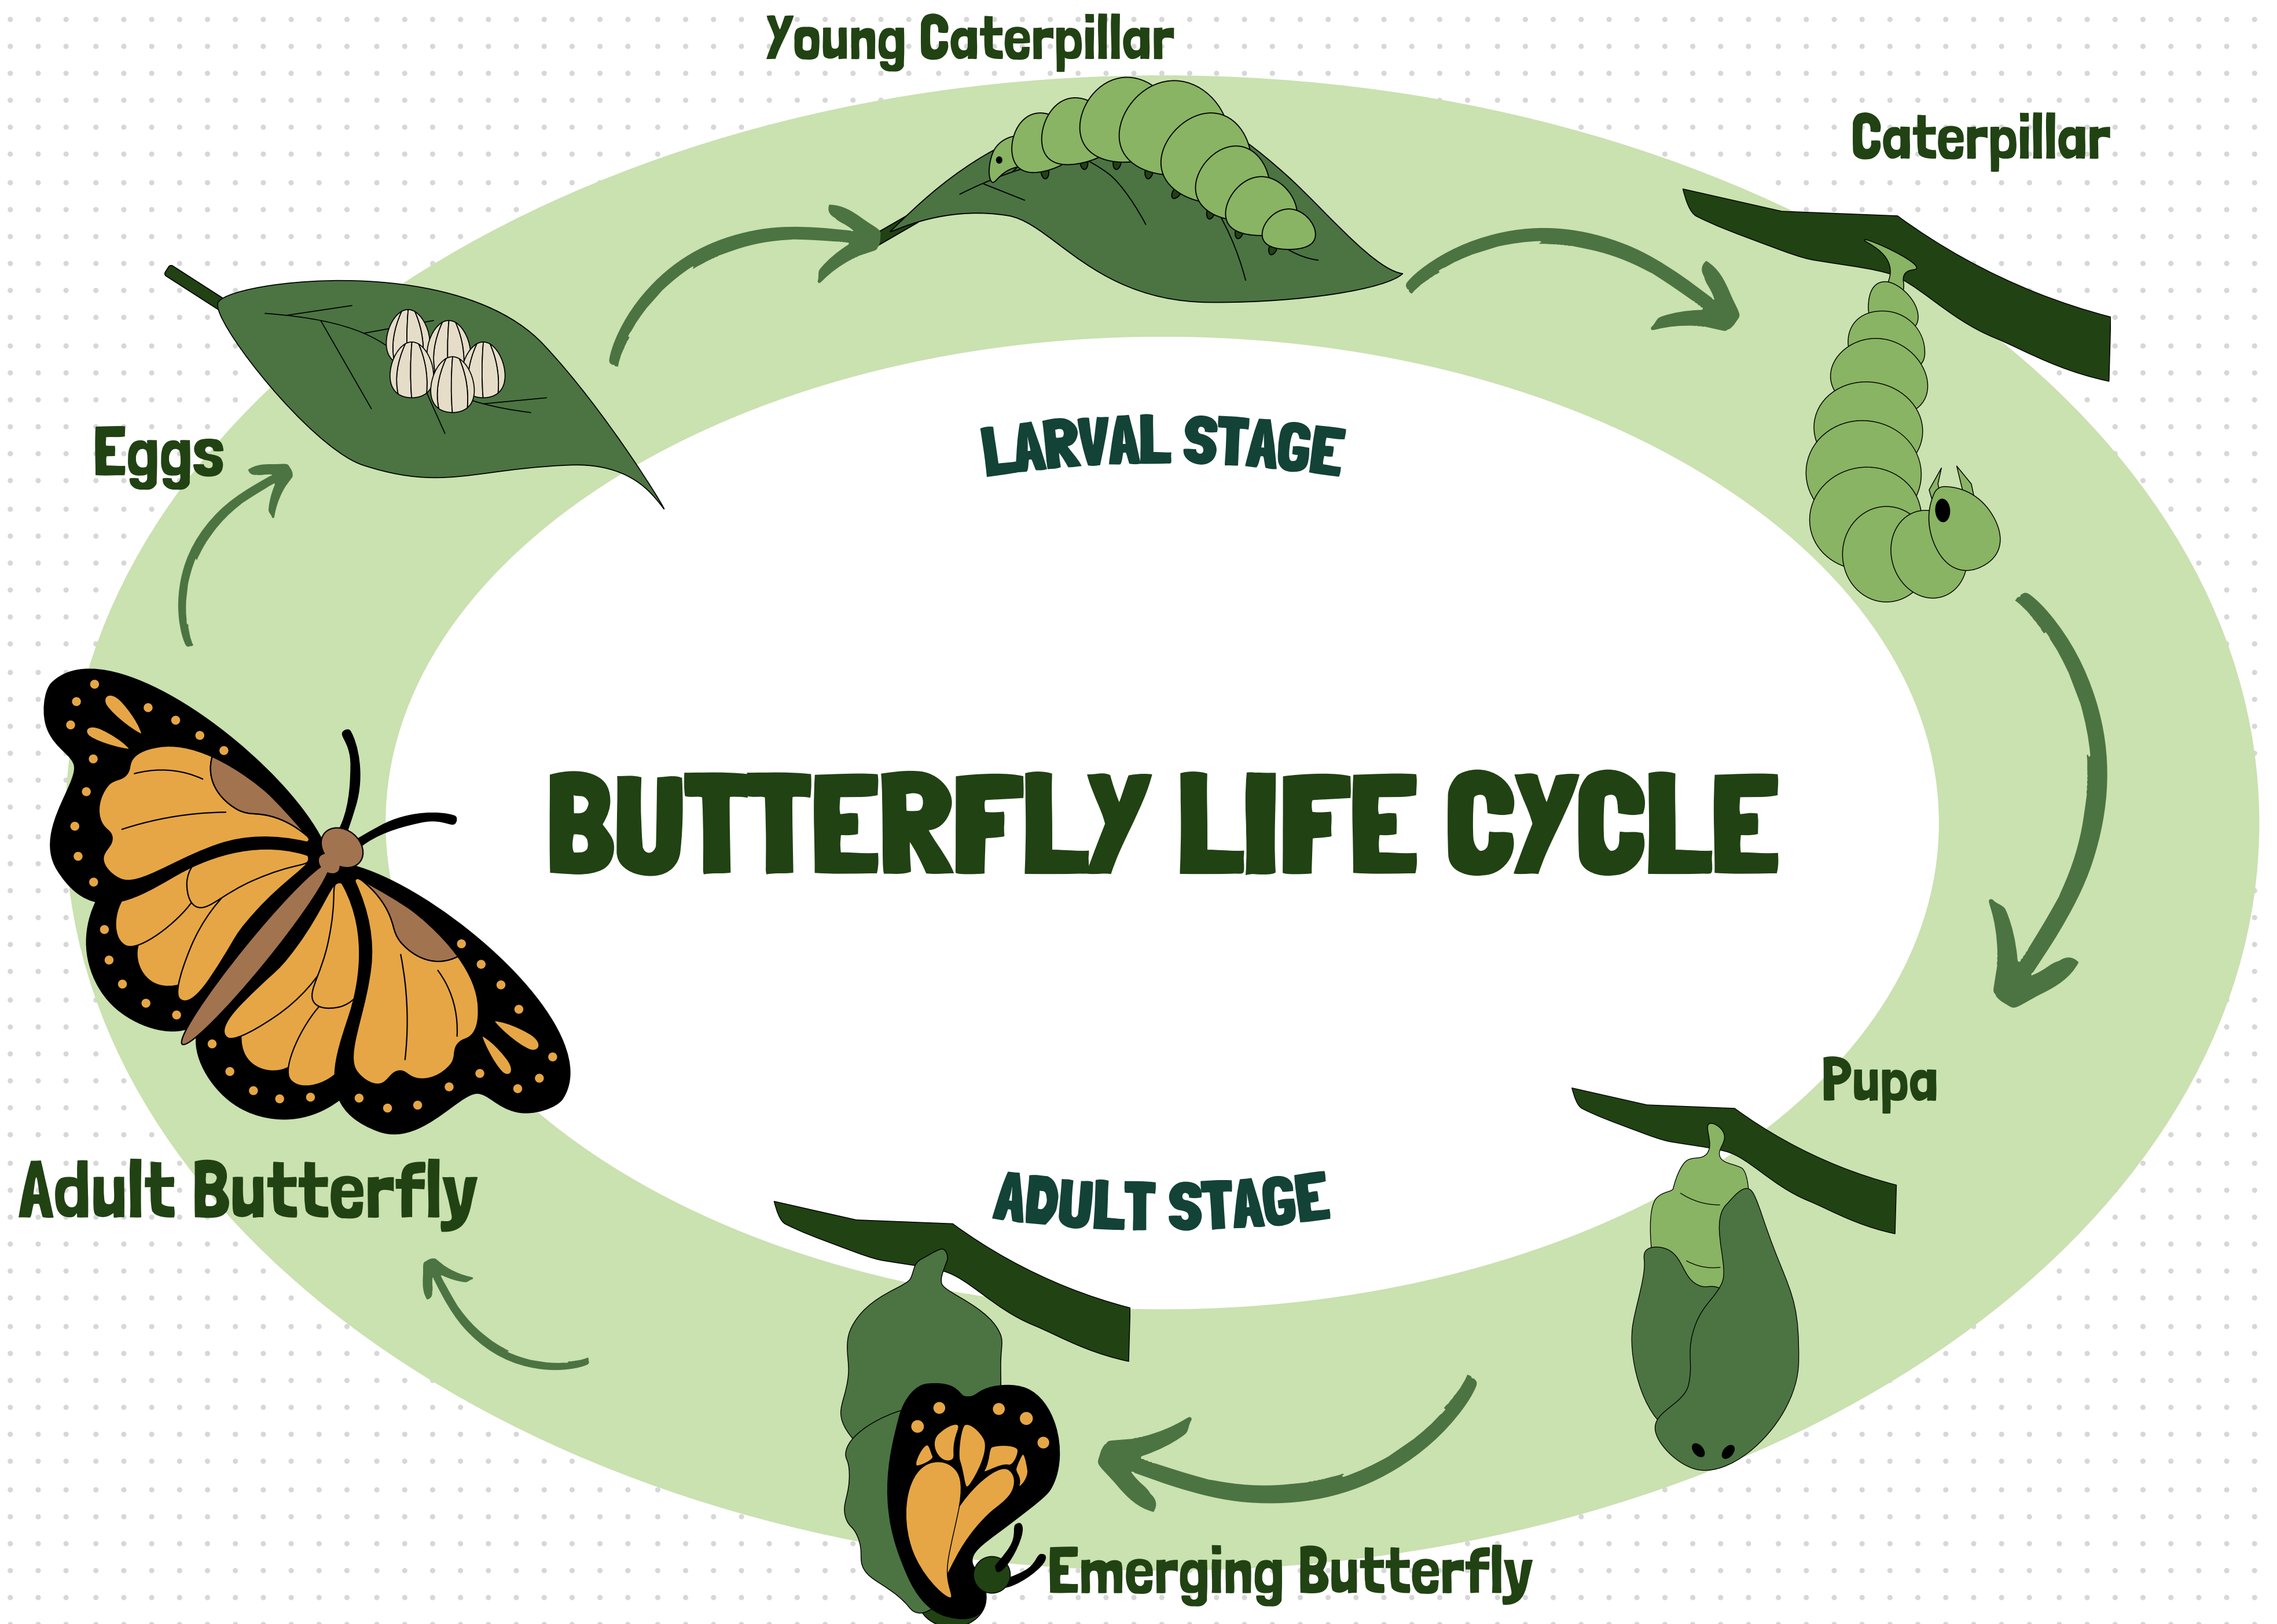

When the caterpillar is fully grown, it attaches itself to a branch or a leaf and sheds its outer skin to reveal a hard protective layer called a chrysalis. Inside, the pupa undergoes a magical transformation from being a caterpillar to a butterfly. This process is called **metamorphosis**.

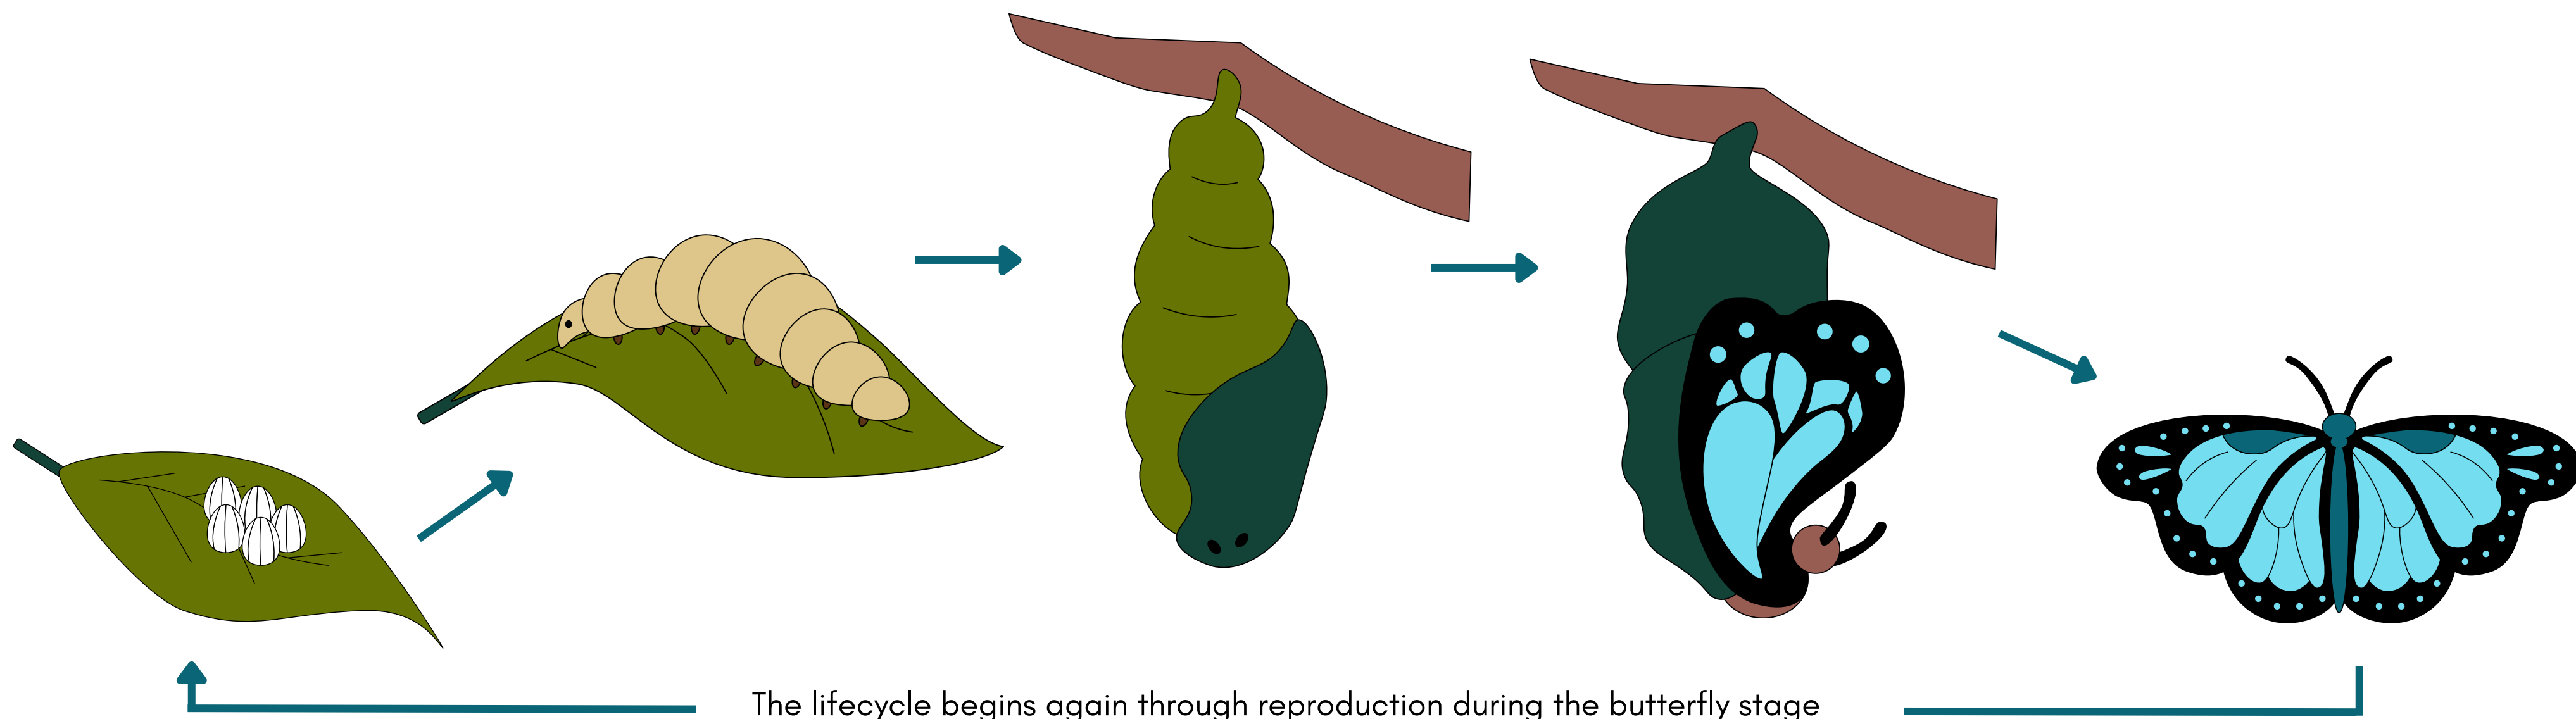

Butterfly

After a few weeks or months (or even years for some species!) a fully grown butterfly emerges.

The butterfly's job is to mate and lay eggs to start a new lifecycle. Butterflies tend to only live for one or two weeks before dying.

egg (birth)

The butterfly lifecycle begins when a female, adult butterfly lays tiny eggs on a leaf. They are often attached to the leaf, and it's hard to notice them. Inside each egg, a baby butterfly is developing.

caterpillar (feeding stage)

After a few days, the egg hatches, and a tiny caterpillar comes out. It is also sometimes referred to as a larva. It is very hungry and starts eating the leaves around it. Caterpillars have many legs and soft bodies. They keep growing by eating.

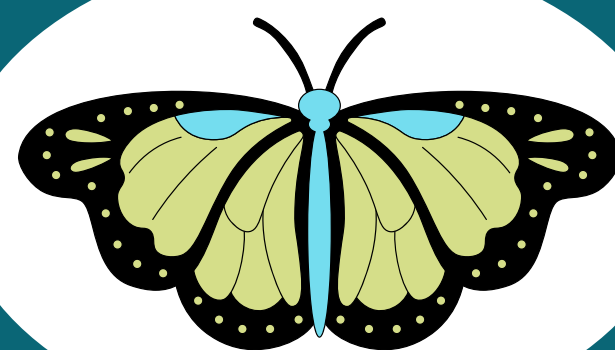

pupa (transformation stage)

When the caterpillar is fully grown, it attaches itself to a branch or a leaf and sheds its outer skin to reveal a hard protective layer called a chrysalis. Inside, the pupa undergoes a magical transformation from being a caterpillar to a butterfly. This process is called **metamorphosis**.

butterfly (reproductive stage)

After a few weeks or months (or even years for some species!) a fully grown butterfly emerges. The butterfly's job is to mate and lay eggs to start a new lifecycle. Butterflies tend to only live for one or two weeks before dying.

BUTTERFLY

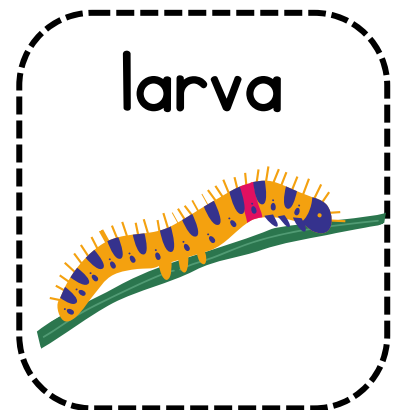

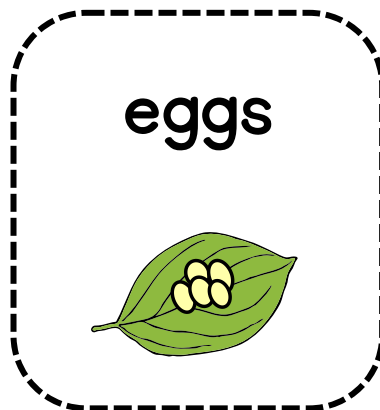

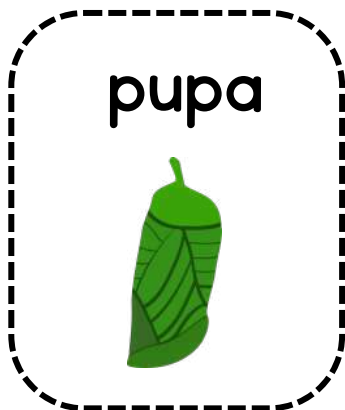

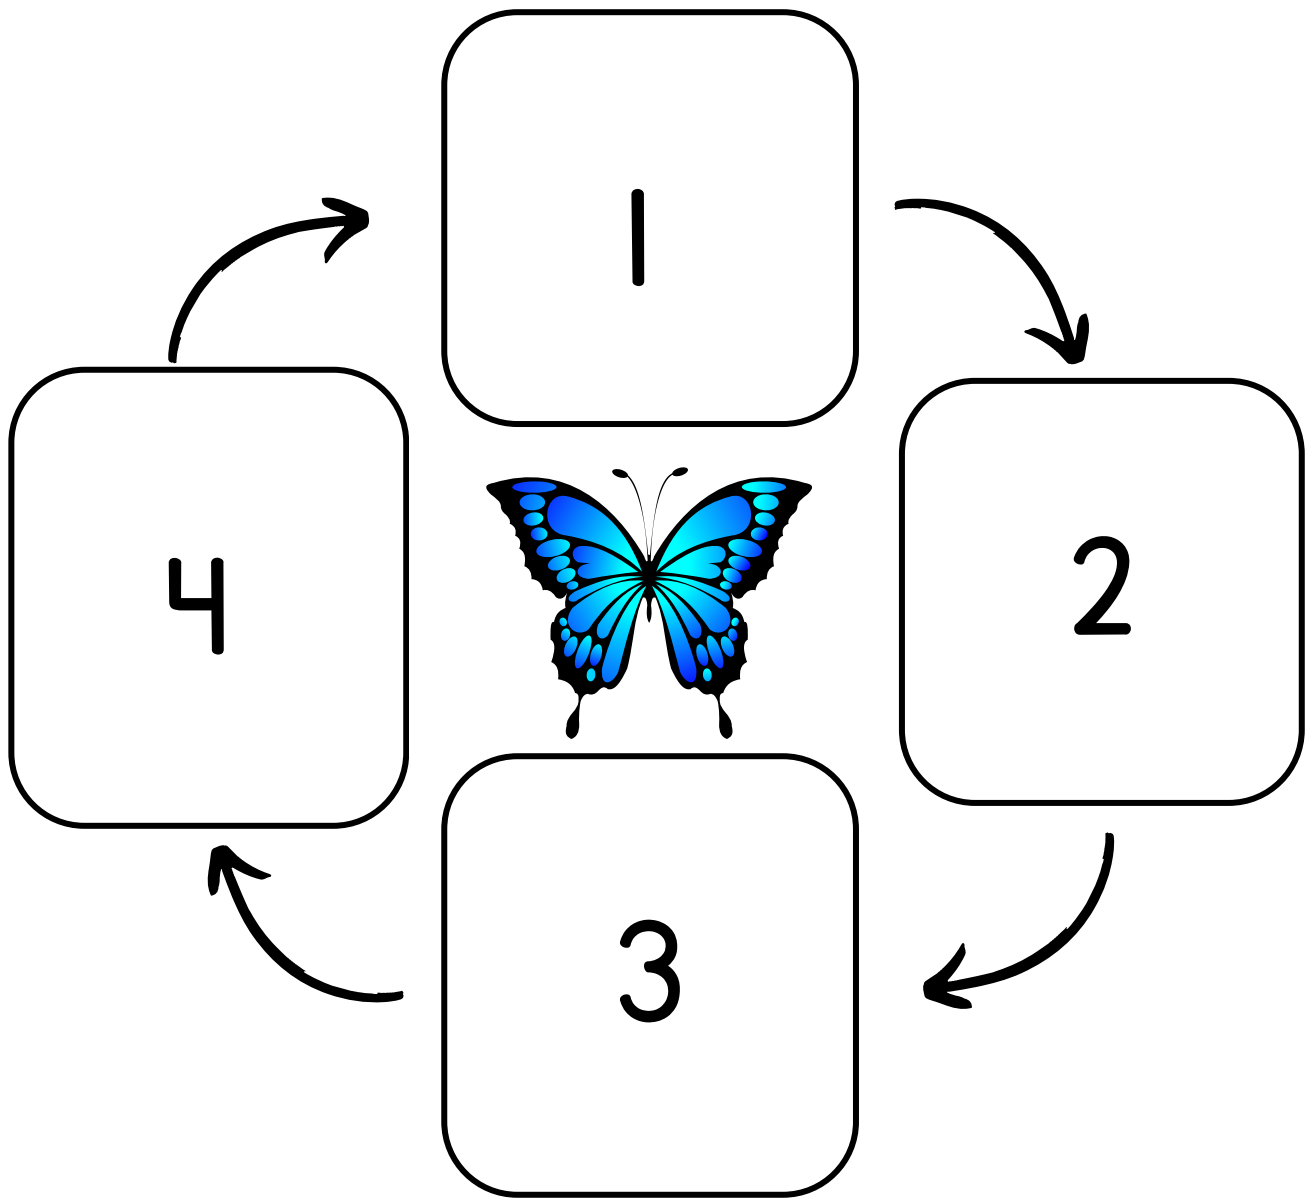

LIFECYCLE

Butterfly Lifecycle Worksheets

Butterfly Life Cycle

Cut and paste the stages of the butterfly life cycle

TRUE OR FALSE

The leaf on which the mother lays her eggs is the first food - the caterpillar will eat.

The 4 stages in the butterfly's life cycle is egg, larva, pupa, - and butterfly.

Butterflies lay their eggs on the ground. -

A butterfly can fly as soon as it emerges - from the chrysalis.

Butterflies lay 5 eggs at a time. -

The caterpillar's job is to eat. -

TRUE OR FALSE

Butterflies never get cold. -

A caterpillar that turns into a butterfly is called a metamorphosis. -

There are more than 50,000 different types of caterpillars. -

As a caterpillar grows, its skin does not grow. -

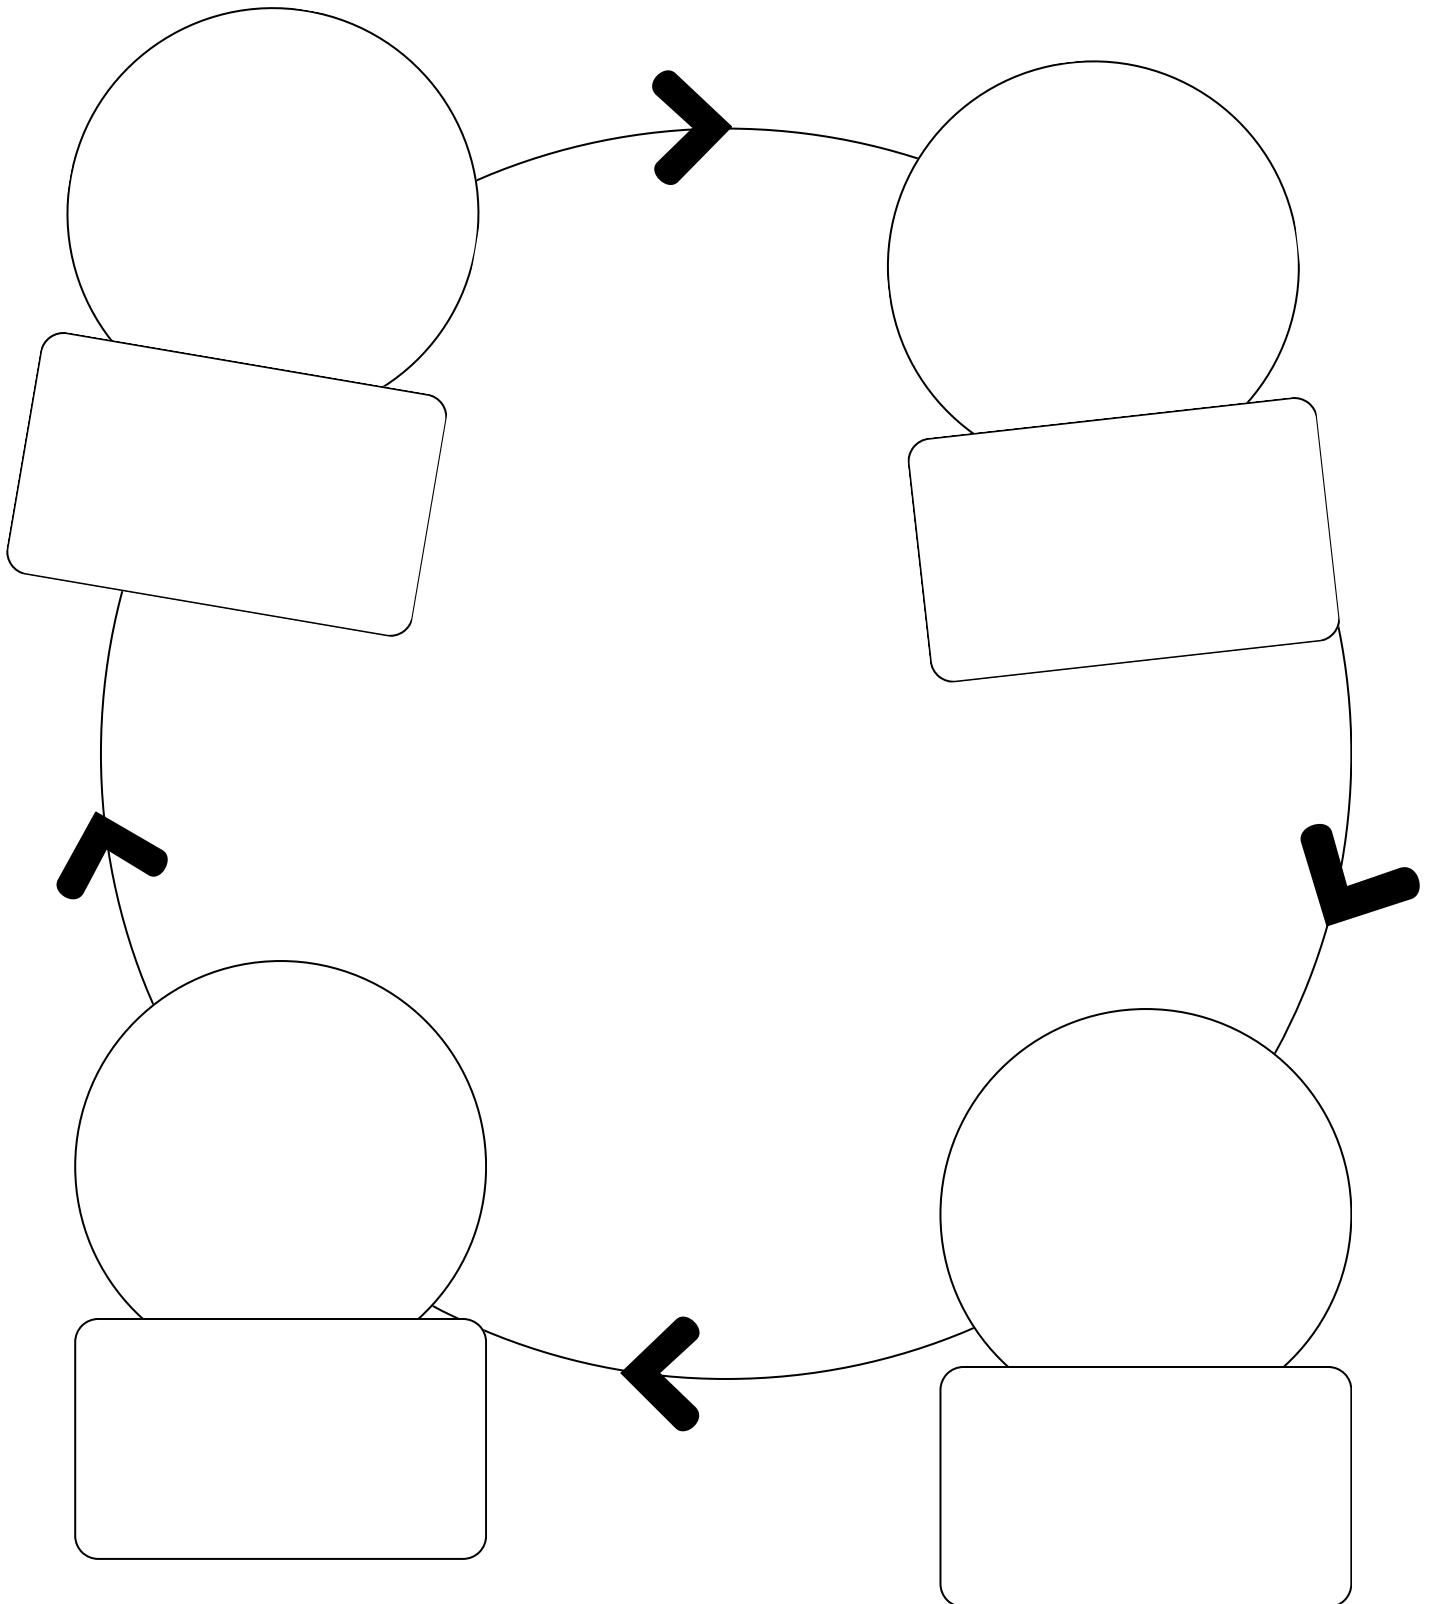

Once a butterfly hatches, it becomes a pupa. -

A butterfly uses its feet to taste. -

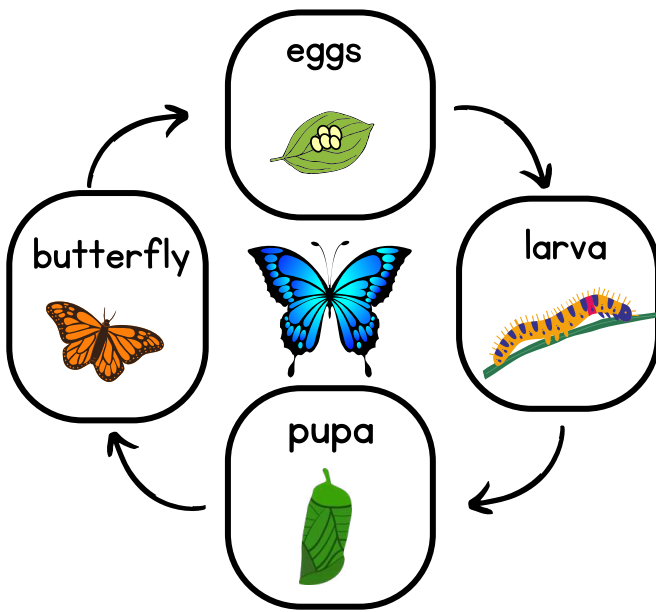

Fill in the Blanks

1. The first stage of the butterfly's life cycle is the _____.
2. The caterpillar eats a lot during the _____ stage.
3. The butterfly emerges from the _____.
4. The butterfly uses its _____ to taste.
5. Butterflies go through _____ stages in their life cycle.
6. The process of changing from a caterpillar to a butterfly is called _____.
7. Butterflies lay their eggs on _____.
8. The stage when the caterpillar makes a chrysalis is called the _____ stage.

**Draw the lifecycle of a butterfly and
name each stages**

Answer Key

Fill in the Blanks - Answer Key

1. The first stage of the butterfly's life cycle is the _____. (Egg)
2. The caterpillar eats a lot during the _____ stage. (Larva/Caterpillar)
3. The butterfly emerges from the _____. (Pupa/Chrysalis)
4. The butterfly uses its _____ to taste. (Feet)
5. Butterflies go through _____ stages in their life cycle. (Four)
6. The process of changing from a caterpillar to a butterfly is called _____. (Metamorphosis)
7. Butterflies lay their eggs on _____. (Leaves)
8. The stage when the caterpillar makes a chrysalis is called the _____ stage. (Pupa)

TRUE OR FALSE - ANSWER KEY

The leaf on which the mother lays her eggs is the first food the caterpillar will eat. - TRUE

The 4 stages in the butterfly's life cycle is egg, larva, pupa, and butterfly. - TRUE

Butterflies lay their eggs on the ground. - FALSE

A butterfly can fly as soon as it emerges from the chrysalis. - FALSE

Butterflies lay 5 eggs at a time. - FALSE

The caterpillar's job is to eat. - TRUE

TRUE OR FALSE - ANSWER KEY

Butterflies never get cold. - FALSE

A caterpillar that turns into a butterfly is called a metamorphosis. - FALSE

There are more than 50,000 different types of caterpillars. - FALSE

As a caterpillar grows, its skin does not grow. - TRUE

Once a butterfly hatches, it becomes a pupa. - FALSE

A butterfly uses its feet to taste. - TRUE
