

FARM ANIMALS

Cows are gentle and friendly animals that live on farms and provide us with milk, which we use to make tasty treats like cheese and ice cream. They eat grass and hay and have four stomachs to help them digest their food. Cows live in big families called herds, where they graze and enjoy each other's company. A baby cow is called a calf.

Fun Fact:

Cows can smell things up to six miles away!

Sheep are fluffy and gentle creatures that are often found on farms around the world. They have thick coats of wool, which keeps them warm in the winter and cool in the summer. Sheep are herbivores, meaning they eat plants like grass and hay. They live in groups called flocks, where they graze together and look out for each other. Sheep are valuable animals because they provide us with wool, which is used to make clothing and blankets. A baby sheep is called a lamb

Fun Fact:

Sheep have rectangular pupils!

Fun Fact:
Pigs can't sweat!

Pigs are sociable animals known for their curly tails and snouts. Found on farms worldwide, pigs are omnivores, meaning they eat both plants and small animals. They enjoy rooting around in the soil with their snouts and love to roll in mud to keep cool and protect their skin from the sun. Pigs are valuable to us as they provide pork, bacon, and other meat products. They're also resourceful, using their snouts to dig and build nests for their younger ones – piglets.

standing
up!

Horses are magnificent creatures known for their strength, grace, and beauty. Found on farms, ranches, and even in the wild, horses have been companions to humans for centuries. They have powerful bodies, long legs, and flowing manes and tails. Horses are herbivores, meaning they eat grass, hay, and grains. They form strong bonds with humans and are often used for riding, racing, and working on farms.

A baby horse is called a foal

Chickens are small, feathered birds commonly found on farms and in backyards around the world. They are known for their distinctive clucking sounds and vibrant plumage. Chickens are omnivores, meaning they eat both plants and insects, and they scratch the ground to find food. They lay eggs, which are a popular source of protein for humans, and some chickens are raised for their meat as well. Chickens live in groups called flocks. A baby chicken is called a chick.

Fun Fact:

Chickens dream when they sleep!

Goats are herbivores, primarily feeding on grass, leaves, and shrubs. Found on farms and in rural areas worldwide, goats are versatile creatures that provide milk, meat, and fiber. They are playful and have characteristic horns. They are known for their ability to climb and jump, often exploring their surroundings with boundless energy. They live in herds, forming strong social bonds with their fellow goats. Goats are valued for their milk, which is used to make cheese, yogurt, and soap, as well as for their meat and wool. A baby goat is called a kid.

Fun Fact:

Goats do not have front teeth in their upper jaw.

Ducks are known for their webbed feet, flat bills, and distinctive quacking sounds. Found in ponds, rivers, and marshes worldwide, ducks are well-adapted to aquatic environments. They are omnivores, feeding on a variety of plants, insects, and small fish. They form flocks, especially during migration, where they communicate through a range of vocalizations. Ducks are valued for their eggs and meat, as well as their role in controlling pests in agricultural settings by eating insects and weeds. A baby duck is called a duckling

Fun Fact:

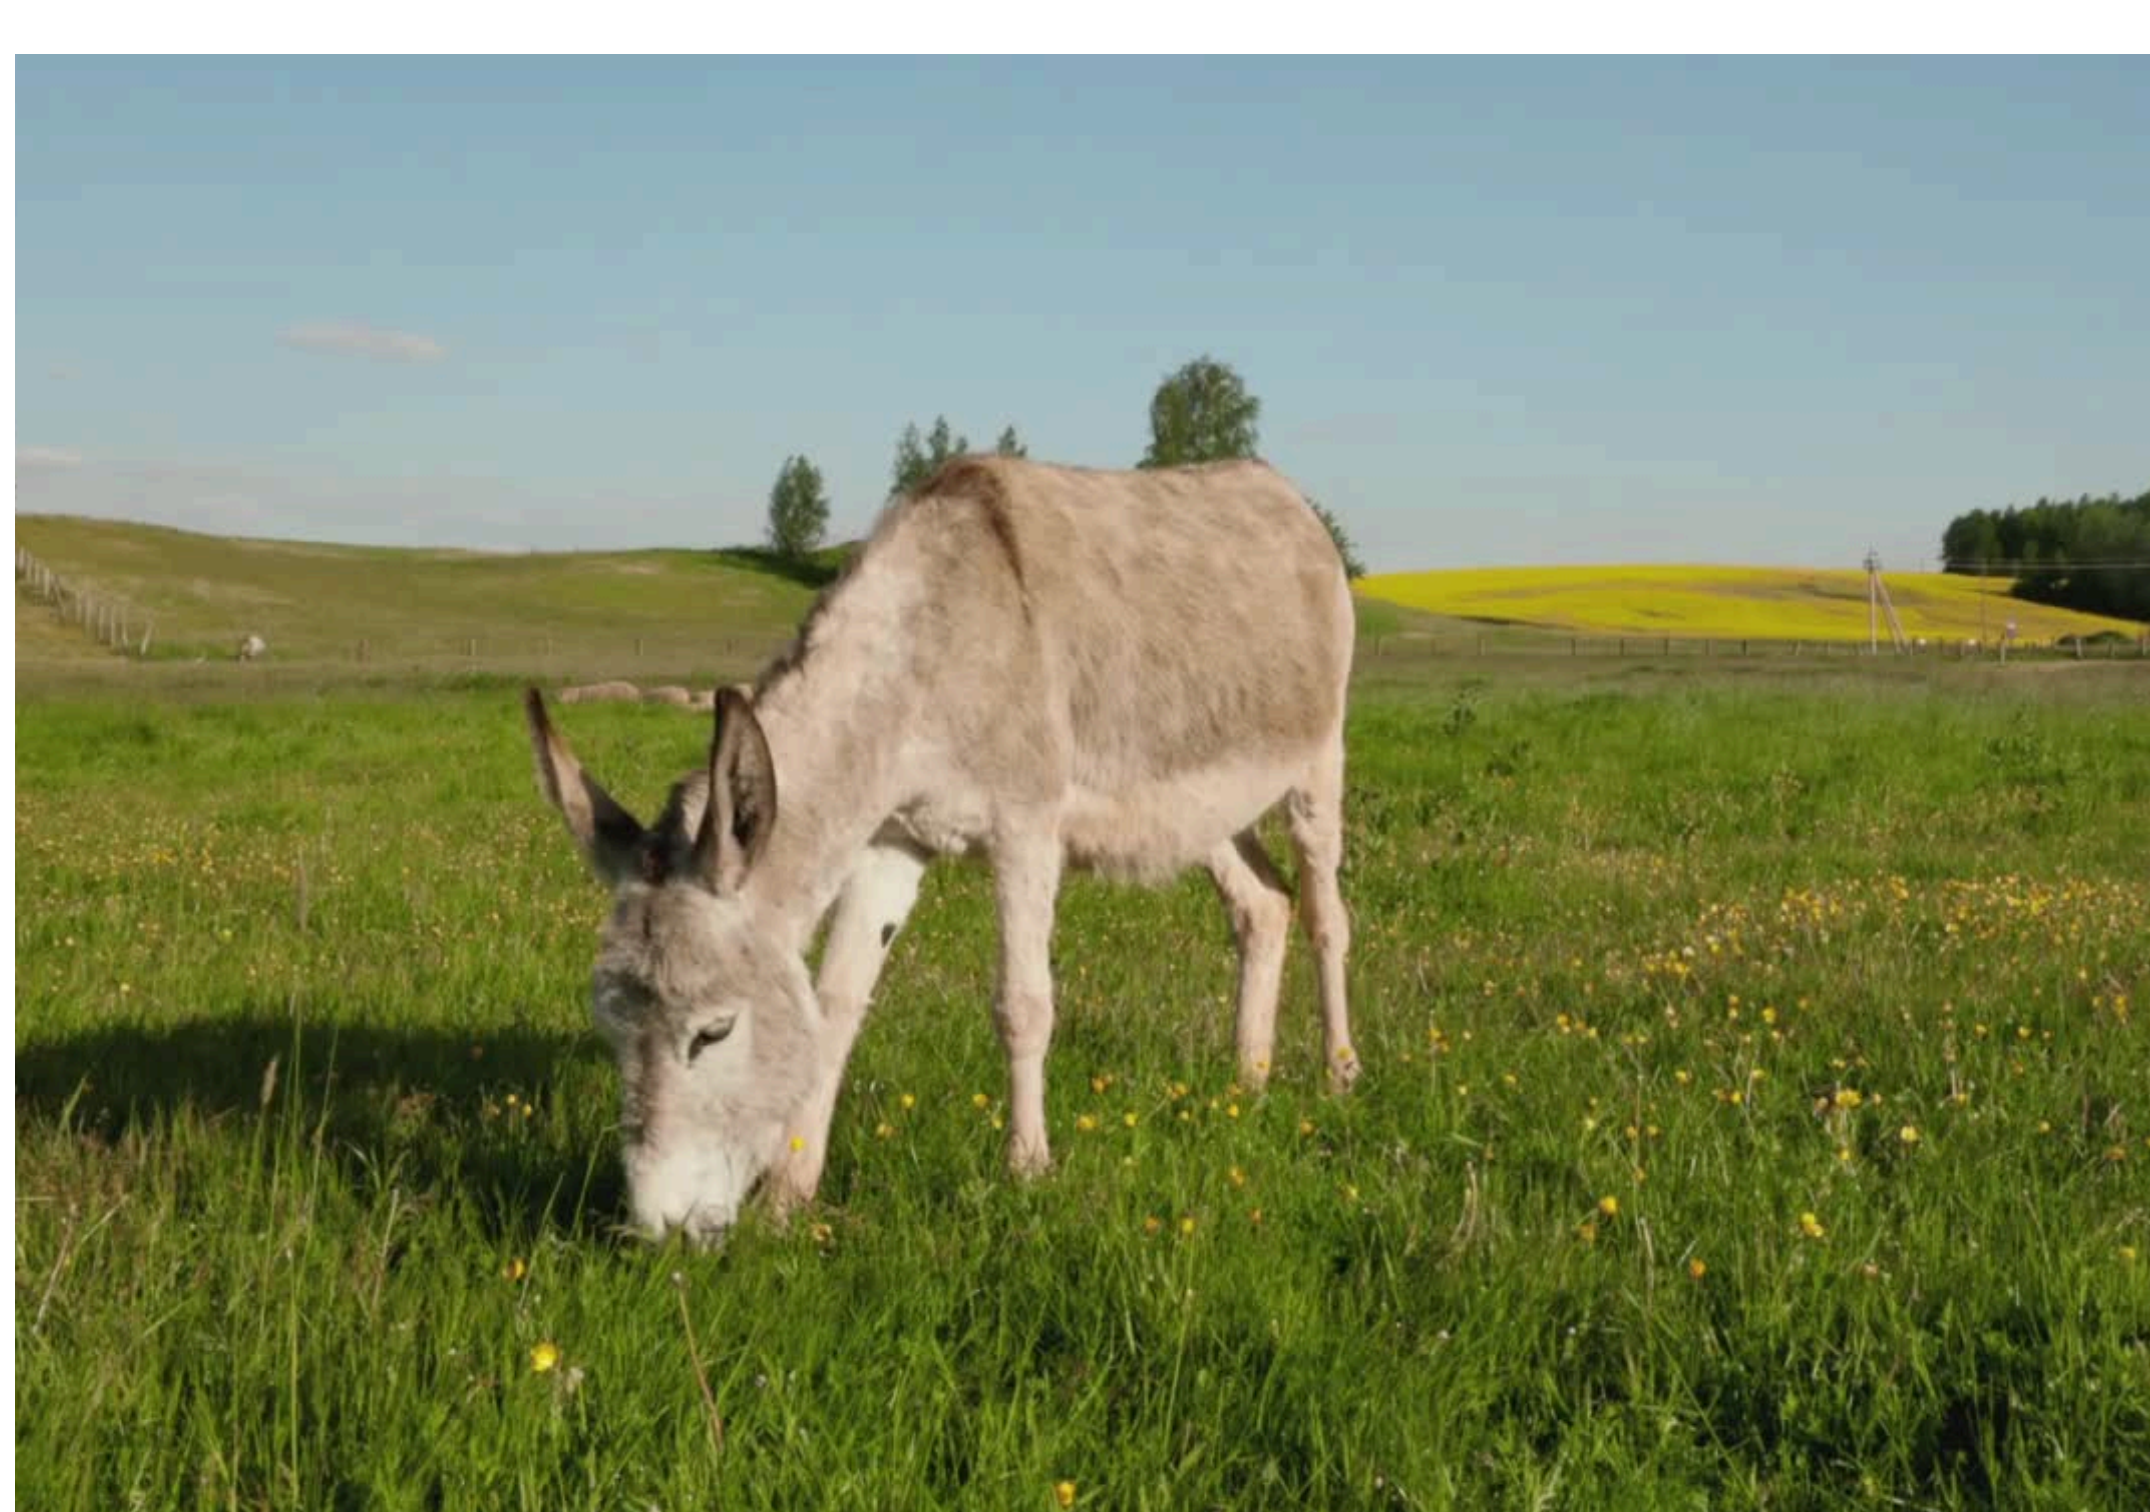

Ducks have waterproof feathers

Rabbits are small, furry mammals known for their long ears, fluffy tails, and hopping movements.

Found in various habitats worldwide, including forests, meadows, and urban areas, rabbits are herbivores, primarily feeding on grass, clover, and other vegetation. They are prolific breeders and live in burrows called warrens, where they seek safety from predators. Rabbits are popular as pets due to their gentle nature and social behavior, often forming strong bonds with their human companions. Additionally, rabbits are raised for their meat, fur, and as laboratory animals for scientific research. A baby rabbit is called a kit or a kitten.

Fun Fact:
**Rabbits have nearly 360-degree
panoramic vision**

Donkeys, known for their long ears and gentle disposition, are domesticated members of the horse family found around the world. These hardworking animals have been companions to humans for thousands of years, used for transportation, agriculture, and even therapy. Donkeys are known for their intelligence and stoic nature, able to carry heavy loads over long distances while enduring harsh conditions. They have a strong sense of loyalty and form deep bonds with their owners, making them valued members of many communities. Donkeys are also known for their distinctive braying sound, which serves as a means of communication among individuals. In addition to their work as beasts of burden, donkeys are appreciated for their calming presence and are often used in therapeutic programs for children and adults alike.

A baby donkey is called a foal

Fun Fact:
Donkeys have a remarkable memory
